EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Randy Gard on March 16, 2005.

The application has been amended as follows:

In the Claims

Claims 1-29 have been cancelled.

Claim 30 is amended.

In claim 30, page 16, line 1-2:

Lines 1-2 have been changed to read as follows:

--A computer-implemented method for eliminating bounceback behavior while performing a product configuration, the method comprising:--

In claim 30, page 16, line 5:

Line 5 has been changed to read as follows:

--propagating within a computer-implemented system including--

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Claim 30 recites a method for eliminating bounceback behavior while performing a product configuration, the method comprising *inter alia*: reinstating the second

Application/Control Number: 09/820,429

Art Unit: 3627

domain member to the set of available domain members by removing the tentative elimination marking unless the input further includes specifying a domain member of a variable other than the first variable and the second domain member of the first variable is also eliminated by constraint propagation over the domain member of the variable other than the first variable.

The most closely applicable prior art of record is U.S. Patent No. 5,844,554 to Geller et al. Geller discloses a user product configuration program module which includes user controls that allow user input of information for use in configuration computations. The methods include creating and maintaining the logic for configuration program module in the form of configuration parameters and linking created visual controls with underlying structure presented by the parameters. However, Geller neither anticipates or fairly and reasonable teaches a method comprising reinstating the second domain member to the set of available domain members by removing the tentative elimination marking unless the input further includes specifying a domain member of a variable other than the first variable and the second domain member of the first variable is also eliminated by constraint propagation over the domain member of the variable other than the first variable.

Claim 37 recites a system for performing a product configuration, comprising, inter alia: a means for bounceback detection operatively coupled to the configuration engine and adapted to reinstate the second domain member to the set of available domain members by removing the tentative elimination marking unless the input further includes specifying a domain member of a variable other than the first variable and the

Application/Control Number: 09/820,429

Art Unit: 3627

second domain member of the first variable is also eliminated by constraint propagation over the domain member of the variable other than the first variable. The system is allowable over the prior art of record for reasons consistent with those identified above with respect to claim 30.

Newly cited article "Configuration Tools Break New Ground --Commerce interfaces hook into back-end systems" discloses the addition of a new configurator functionality that gives buyers more inventory data and flexibility in mixing and matching features and pricing options. This article fails to anticipate or fairly and reasonable teach a method and system in reinstating the second domain member to the set of available domain members by removing the tentative elimination marking unless the input further includes specifying a domain member of a variable other than the first variable and the second domain member of the first variable is also eliminated by constraint propagation over the domain member of the variable other than the first variable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marissa Thein whose telephone number is 703-305-5246. The examiner can normally be reached on M-F 8:00-5:00.
